

Code: GAAA or GAAB  

The Parker positive traction motor system "Posi-Trac" is designed for use on hydrostatic drive machines, with either open or closed hydraulic systems. This all hydraulic, Posi-Trac system allows for full differential effect until wheel slip occurs. The basic circuit utilizes two Parker Torqmotors™ in series. Each of these motors contains a two position valve located in the motor's end cover. These two Posi-Trac motors communicate with each other using two crossover hoses. Before wheel slip occurs, one motor provides the traction for the machine. Once wheel slip occurs, both wheels become the driving wheels and both have full traction capabilities. Posi-Trac smoothly engages without operator intervention. In the case where both wheels have very little traction, as with sand or loose gravel, the Posi-Trac power transmission alternates from side to side smoothly and quietly and drives the vehicle through the media. Posi-Trac is available in four wheel drive configurations, and Limited Slip variations also. Contact the factory for details.

Patented Hydraulic Circuit

An Economical Sensor for Speed Readout

This rugged, weather resistant design is ideal for industrial and mobile applications. Applications include salt/sand/fertilizer spreader drives, conveyer drives and injection molder compression drives. The sensor is a hall-effect type, which when externally powered outputs 30 square wave digital pulses per coupling shaft revolution. The connector is a user friendly universally available 4 pin polarized M12 connector allowing for simplified field service. The integrated design does not effect the side load capacity or performance of the torque motor.

Dieser robuste, witterfeste Drehzahlaufnehmer arbeitet nach dem Halleffekt. Es werden 30 Rechteckimpulse pro Abtriebswellenumdrehung erzeugt. Durch Erfassung der positiven und negativen Wellenflanken sind 60 Impulse pro Umdrehung möglich. Der Sensor führt zu keiner Leistungsbeschränkung des Motors. Die volle Radiallastkapazität bleibt erhalten.

Un capteur économique pour mesure de la vitesse. Ce capteur robuste et résistant aux intempéries est à effet Hall. Alimenté par une source externe, il fournit 30 ondes digitales carrées par tour. Par multiplication électronique on obtient 60 pulsations par tour. Son montage ne modifie pas le couple ni la charge radiale du moteur qui le reçoit.

Este es un diseño de construcción reforzada, apto para uso a la intemperie e ideal para uso industrial y en equipos móviles. Entre sus aplicaciones, se puede mencionar esparcidores de sal, arena o fertilizantes, unidades motoras de transportadores y unidades motoras de compresión para moldeo a inyección. El sensor es del tipo de medio efecto, que al ser excitado externamente, genera 30 pulsos digitales de onda cuadrada por cada revolución del eje del acoplamiento. Utiliza un simple conector M12 polarizado tetrapolar, que es de uso común y facilita el mantenimiento en el lugar de instalación. El diseño integrado no afecta la capacidad de carga lateral ni la potencia del motor de torque.

A Hot Oil Shuttle is used to continuously remove a portion of the fluid in a closed loop transmission or other closed loop system. At 125 PSI pressure differential between the motor return port and the shuttle outlet, 1.5 GPM* will exit the circuit to cool, filter and return to the reservoir. The constant loop replenishment helps to keep heat and contamination from building up in the circuit. This option is not available with rear ports or integral cross over relief.

Spülventil für geschlossene Systeme zur Rückführung einer definierten Menge des Niederdrucköls in den Tank zur Abkühlung innerhalb desselben Kreislaufs.

Valve de rincage pour systèmes fermés pour le retour d'un volume déterminé de fluide basse pression vers le réservoir, un refroidisseur ou un filtre de réfrigération, dans le même circuit.

Un transferidor de aceite caliente actúa permanentemente para extraer una parte del fluido en una transmisión de circuito cerrado u otro sistema de circuito cerrado. Entre la entrada de retorno del motor y la salida del transferidor hay una diferencia de presión de 125 psi (libras/pulg.²), y a esta presión salen 1.5 galones por minuto del circuito para enfriarse, filtrarse y volver al depósito de fluido. El reacondicionamiento permanente de parte del fluido evita la contaminación del mismo y el incremento de temperatura en el circuito.

Code: AAAC 

Double Paint — Base coat of red oxide primer and finish coat of black paint for increased corrosion resistance.

Code: AAAF* or AABP  

Castle Nut — All motors ordered with Tapered shafts are equipped with patch locking nuts. If desired, a castle nut may be specified.

Code: AAAJ* or AAFG  

Vespel™ Commutator Seal — Under conditions of high temperature, it is suggested that a vespel commutator seal be used.

Code: AAAG* or AAAH  

Fluorocarbon — is available under various registered trademarks, including **VITON™** (a registered trademark of DuPont), **FLUOREL™** (a registered trademark of 3M) or **FPM™** (a registered trademark of DuPont).

Code: AABJ* or AABK  

Free Running Rotorset — The “free running rotorset” is a specially dimensioned rotorset that allows for smoother operation at low flows and low pressure. Volumetric efficiency can be affected.

Code: AANM*  

Seal Saver — Seal saver is a metal disc that presses onto the motor shaft, covering the dirt and water (D&W) seal. Its purpose is to aid in preventing external contamination from damaging the D&W seal.

Code: AAAC
